

Stellar
SSD Recovery Services

Wherever your data may be
we fish it out!

Stellar SSD Recovery Services

Stellar has studied every bit of the SSD (Solid State Drive) internals, and devised many powerful SSD recovery techniques to recover SSD data without any hardware / software limitation. The in-house R&D team of Stellar have analysed various models and brands of SSD devices to develop many efficient SSD recovery tools and techniques to recover your data. Stellar's efficient, risk free and systematic approach assures up to 100% recovery of your data.

The world's leading data recovery company

Worldwide with strong presence in Europe, the US and Asia

State-of-the-art technology

Present in 10 European countries

Stellar recovers data from the following brands:

Corsair | Intel | Kingston | Micron | OCZ | Samsung | SanDisk | Toshiba | and others...

What is SSD?

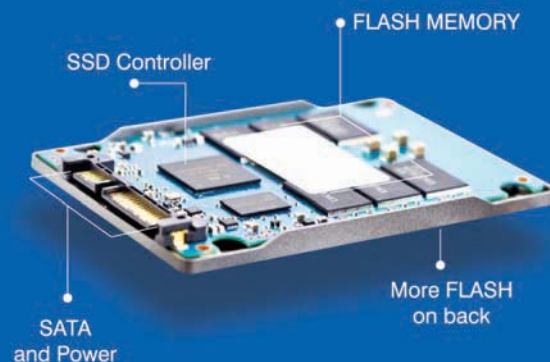

A solid-state drive (SSD) is a data storage device that uses integrated circuit assemblies as memory to store data permanently. Compared with electromechanical Hard Drives, SSDs are more reliable, higher in performance and have a greater durability.

Common causes that lead to DATA LOSS

- SSDs losing their ability to retain data after thousands of write / erase cycles
- Damage to the internal circuit of memory / SSD
- Corruption of SSD by a virus or malware
- Accidental data deletion or sabotage
- Malfunction in the controller chip resulting in corruption of the encryption/decryption module
- Damage to the media by excessive heat, electrical surge, spilling liquids over the SSD device, etc.

Stellar's Capabilities:

Most SSDs use advanced controller technologies to extend their reliability and speed. The architecture inside these high performing SSDs is more complicated than in most RAID systems. Stellar has done long and extensive research and has experience, built up during many years, on all kinds of data loss from SSD devices. Stellar ensures a maximum recovery of your valuable data from even the most complicated SSD storage devices.

No matter how dependable, the SSD will wear out sooner or later, and this occurs without warning.

Laboratories in **EUROPE | US | ASIA**

The industry's Best **DATA RECOVERY** Solution Provider since 1993

STATE OF THE ART Technology Labs (ISO 5/Class 100 cleanrooms)

ASSURES **100% CONFIDENTIALITY** of data

100% transparent process

Team of Specialised Data Recovery and **R&D EXPERTS**

ISO 9001:2008 certified

No Data **NO CHARGE POLICY**

Over 1 million satisfied customers

"This is WOW! I always thought that once it's deleted it is gone forever. I wish I had known about data recovery years ago. Great team work! Well done Stellar!"
